

Media Composer | PhraseFind Option

Accelerate editing with
powerful dialog search

It's back and better than ever!
Stop wasting time and money
generating transcripts of your
projects just to organize and
locate media more easily. With
PhraseFind—the powerful new
version of the acclaimed dialog
indexing and search option
for **Media**

Composer subscriptions and
perpetual licenses and included with **Media Composer | Ultimate**—you can quickly find all
relevant clips by simply typing a word or phrase. PhraseFind automatically analyzes all clips
in your project and phonetically indexes all audible dialog, so you can spend less time
searching for the right media and more time focusing on what matters most—your story.

RESOURCES

- PhraseFind and ScriptSync [FAQ](#)
- PhraseFind [FAQ](#)

FEATURES

- **Work faster and easier with new features**
- **Find the right clips fast**
- **Experience seamless integration**
- **Speed up your workflow**
- **Work in different languages**
- **Use PhraseFind with the latest Media Composer**
- With the more powerful phonetic indexing engine, PhraseFind can now catalog volumes of dialog-driven media and deliver search results faster than ever before, saving valuable

time and money. It also supports shorter phoneme phrases, so you get more accurate results, better indexing of unclear audio, and support for more dialects and accents. And its updated look and feel offers better visual integration with Media Composer.

- Eliminate the need to review, log, and triage hundreds of hours of footage to find what you're looking for. With superfast indexing, PhraseFind does the "listening" work for you and then locates all relevant clips based on your search criteria in seconds, with highly accurate results. Plus, with the new Auto-fill feature, you can perform more efficient searches to speed things along.
- PhraseFind directly integrates with your Media Composer Find tool, so you can immediately start editing clips right from within your search results. No need to export or import clips, or even find the right bin or media file. All search results are automatically ranked for accuracy and appear in a virtual bin in Media Composer. You can even use other search criteria in the Find tool to refine results further.
- No need to know where your desired media is housed. PhraseFind can search project material stored across local and shared storage. You can also save any frequently performed search and limit your search results to only locate clips from a given tape name, video resolution, or any other bin column metadata you want.
- PhraseFind comes with a wide variety of language packs and dialects, including English (American, Australian, and UK), Arabic, Dutch, Farsi, Flemish, French (Canadian and European), German, Hebrew, Hindi, Italian, Japanese, Korean, Mandarin Chinese, Polish, Portuguese (Brazilian), Russian, Spanish (Castilian and Latin American), Thai, and Turkish. This enables you to work on projects and locate clips in a multitude of languages, without having to spend extra on additional language packs.
- Got Media Composer 7.x or earlier with an older version of PhraseFind? No need to worry about losing access to your PhraseFind tools when you upgrade to Media Composer 8. PhraseFind 2 works with the latest version, so you can take advantage of all the latest tools and features in both software titles to accelerate and elevate your storytelling experience.

SYSTEM REQUIREMENTS

- [Avid-qualified Mac or Windows-based computer](#)
- Media Composer or Media Composer | Ultimate subscription, or Media Composer 8.8 or higher perpetual license
